

JJS Electronics redefines conventional EMS with additional precision mechanical assembly expertise

Currently experiencing a rapid rate of growth, Electronics Manufacturing Services provider, JJS Electronics, reports a rising demand for its precision mechanical assembly capabilities. Taking EMS beyond its traditional remit of PCB assembly, JJS is highly experienced in a special array of precision mechanical assembly and system integration disciplines.

In addition to its world class PCB assembly capabilities, the UK and Czech Republic-based contract manufacturer is increasingly being recognised for its proven proficiency in non-electronics based precision mechanical assembly techniques. With cable, electrical, ‘mechatronics’ and system assembly, this activity gives JJS a near unique position in the marketplace, offering extensively integrated manufacturing services. Many complex mechanical assemblies demand similarly high levels of skill, precision, accuracy and consistency to their electronic counterparts. JJS has staff dedicated to this highly skilled work, including testing of mechanical and pneumatic assemblies.

Commenting on the company’s precision mechatronics expertise, JJS Sales & Operations Manager, Neil Sharp, explains: “Here at JJS, we like to demonstrate that we’re no ordinary EMS company. Unlike most contract electronics manufacturers, we do far more than PCB assembly alone. For example, in addition to complex through-hole and SMT PCB assembly and test expertise, we also deliver proven non-electrical based precision mechatronics capabilities – delivering a truly comprehensive range of

contract manufacturing services. Backed up by state-of-the-art facilities, talented engineers and pioneering processes, precision mechatronics from JJS delivers unbeatable value and complete reliability. So, we really are extraordinary!”

JJS’ lean commitment is an essential part of its precision mechanical assemblies expertise, enabling the team to analyse and reconstruct every manufacturing step required to build a product to optimise quality, efficiency and consistency. The company’s proven supply chain management capabilities are also integral to this process, ensuring not only the availability of parts at the right time in the right place, but also providing the basis for comprehensive logistics and after market solutions including Configure To Order (CTO), direct shipments to end users, RMA processing and product repair. Manufacturing operations in both the UK and the Czech Republic, coupled with the backing of a £30m group of electronics companies, ensure a solid foundation for JJS’ precision mechanical assembly services.

About JJS Electronics Ltd.

JJS Electronics Ltd. is a UK-based EMS company with facilities in Lutterworth, England and Chomutov, Czech Republic. With an established record of providing reliable and cost-effective electronics, electrical and mechanical contract manufacturing services, JJS delivers a full range of EMS services including design for test, design for manufacturing, PCB assembly, mechanical assembly and system assembly. The company’s comprehensive EMS portfolio is supported by robust material procurement, inventory management, component engineering and test services. Serving a wide range of industries, the company has a strong presence in market sectors including communications, industrial controls, IT, medical and scientific instrumentation.
